Blueberry

New Thornless **BOYSENBERRY**

Order by Catalog No. N-2815

The most profitable vine fruit in cultivation today, producing better than 6 tons of fruit per acre. Berries average 1 1/2 to 2 inches long and 1 inch thick. Vines are absolutely thornless, so don't confuse this with the old thorny variety. Flavor is a combination of Raspberry, Loganberry and Blackberry, from which it was crossed and originated. An outstanding fruit to serve fresh, for pies, jellies or to put in your freezer. Set plants 6 feet apart each way. Extremely hardy. 5 for \$1.25; 10 for \$2.00; 25 for \$4.00; 50 for \$7.00; 100 for \$12.00. Prepaid.

New Cultivated **BLUEBERRY**

Everybody loves Blueberries, but you really never have tasted any good ones unless you have eaten some of these Cultivated varieties. Fruits are as large as the end of your thumb. Produced in profusion on strong, stately bushes. They are different than most plants, requiring acid soil; therefore, before planting mix a little Peat Moss, sawdust or leaf mold with the soil to keep it acid. Berries grow in clusters like small bunches of Grapes. Sweet and mild with hardly any seeds. Fruit ripens from early July until the forepart of August. Plant no less than two to insure cross-pollinization.

A new scientific discovery that comes in tablet form. Dissolved in water, sprayed on blossoms as soon as they appear on Tomato plants, Cucumber, Melon and Squash vines will make the blossoms adhere to the plant, increasing the yields 25 to 50% above normal. In addition to the increased yield, if sprayed continuously until fruit sets, most of the fruit will be seedless. Four tablets make 1 quart of spray solution. Complete instructions on every package. No. 1748 — One Package, 40 Tablets, 50c, postpaid.
No. 1749 — One Package, 100 Tablets, \$1.00, postpaid.

Universal Favorite Throughout the Nation

Catalog No. 249

Condon's Cannon Ball represents the highest achievement in Cabbage breeding, and is the best extra early round headed Cabbage we have ever grown or seen. Its evenness in maturing has proved it a great favorite with all Cabbage growers as they appreciate the great importance of being able to clear off the ground at one cutting, especially where room is required for a second crop. The plants are of compact, stocky growth, producing large, solid, ball-shaped heads which average about five pounds in weight, and are of the very finest quality, smooth with fine veins and small core. EGG PLANT

Delicious Vegetable—Easy to Grow.
Include in Your Garden This Spring.
1 oz. of Egg Plant seed will produce about 1000 plants.

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss. Use when young, at which time the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost. A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes, 8 to 9 weeks before the time to set the plants out in the garden. Don't plant in the garden until danger of frost is past.

380 Large New York Purple

287 Condon's Select Danvers "Supreme Strain"

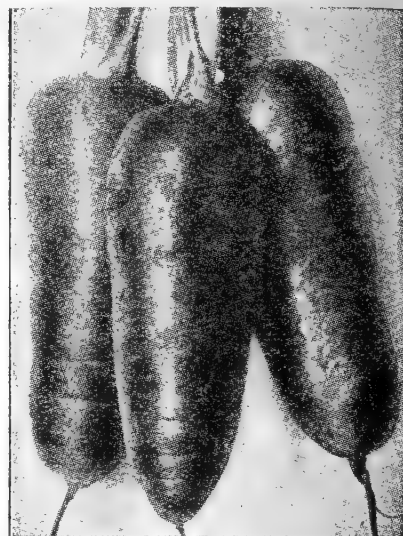

For Critical Market Gardeners and Private Planters
—The Earliest and Sweetest of All Table Carrots
Used Annually by the Largest Planters

Danvers carrots have been the standard for over fifty years and we need not try to offer any proof as to their popularity. Carrot-breeding is in about the same class as stock-breeding, and if same is not kept true, will deteriorate very quickly. We have endeavored to do more than keep the old parent sort true, and have actually bred up the quality of Danvers Carrot to such perfection that the old parent sort would be ashamed of itself. To distinguish our sort from others, we have termed our strain Condon's Select Danvers. Same has been bred for quality and for yield and on a given acreage it has produced a larger crop of marketable roots than any other garden or table variety. The roots are of a rich orange color, crisp and sweet. Pkt. 15c; oz. 40c; ¼ lb. 80c; ½ lb. \$1.35; 1b. \$2.50, postpaid.

The World's Famous Pickling Variety

This is a selection made from the "Chicago Pickle" by a veteran pickle grower, Mr. Snow, of the famous Snow Pickle Farm, Rockford, Ill. The type is shorter when ripe than the Chicago Pickle and is broad at the stem end tapering slightly to the tip. The small pickles are dark green, cylindrical and square ended. If the fruits are gathered as soon as large enough, the vines will continue bearing through a long season. Pkt. 10c; oz. 25c; ¼ lb. 70c; ½ lb. \$1.25; lb. \$2.25, postpaid.

Lettuce — Condon's Earliest Curled

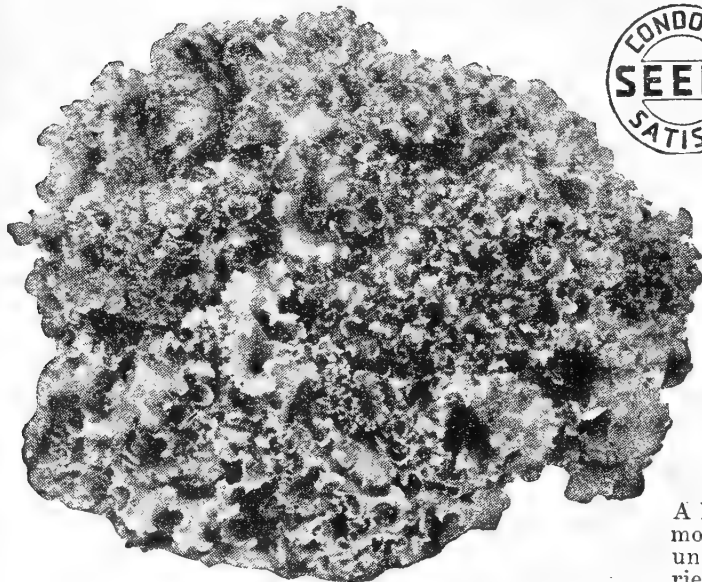

MARKET GARDENERS' FAVORITE

The Great Outdoor Curled Leaf Variety

Withstands Extremes of Weather Better Than Any Other Variety We Know Of.

The earliest, largest, hardiest, crisp, tender, curled Lettuce in cultivation. Quick money maker for the gardener, and unexcelled for backyard home gardens. We recommend this as one of the very finest early curled varieties. We introduced this in 1912 and it has become more popular each succeeding year. It is vastly superior to the old varieties for green-house forcing, and in our opinion it excels all other varieties as a loose leaf Lettuce for outdoor culture. Makes quick growth, forming large bunches of loose leaves exceedingly tender and very curly. Color light green. Pkt. 15c; oz. 30c; ¼ lb. 90c; ½ lb. \$1.50; lb. \$2.75, postpaid.

440 Condon's Market Gardeners' Early Curled

450 Tomhannock

Handsome Reddish Bronze Edged

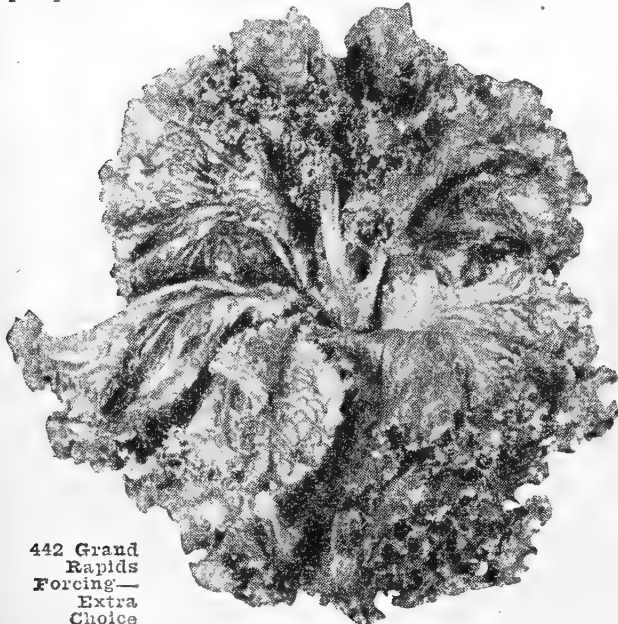

This Lettuce does not head—makes a loose bunch of leaves of very fine quality. Edges of the outer leaves are a reddish bronze; within, the leaves are almost white. Very crisp and tender. Pkt. 10c; oz. 25c; ¼ lb. 65c; ½ lb. \$1.10; lb. \$2.00, postpaid.

454 Oak Leaf

Improved strain of an old favorite variety that again came into prominence during the past few years. It is strictly a butter flavored loose leaf variety. Leaves are rich dark green, very tender, and resistant to hot weather. The leaves are deeply lobed like an oak leaf. We recommend this as an outstanding loose leaf home garden variety. Pkt. 15c; oz. 45c; ¼ lb. \$1.15; ½ lb. \$2.00; lb. \$3.75, postpaid.

442 Grand Rapids

This variety is especially adapted to green-house culture in winter. In the great Lettuce-growing centers our strain of this Grand Forcing sort is very largely used. It is superior to and more beautiful in appearance than the Simpson. It is of rapid, upright growth; may be planted close; not liable to rot, standing several days after being ready to cut without injury; retains its freshness a long time after being cut, hence is much sought after by dealers. Pkt. 10c; oz. 25c; ¼ lb. 65c; ½ lb. \$1.10; lb. \$2.00, postpaid.

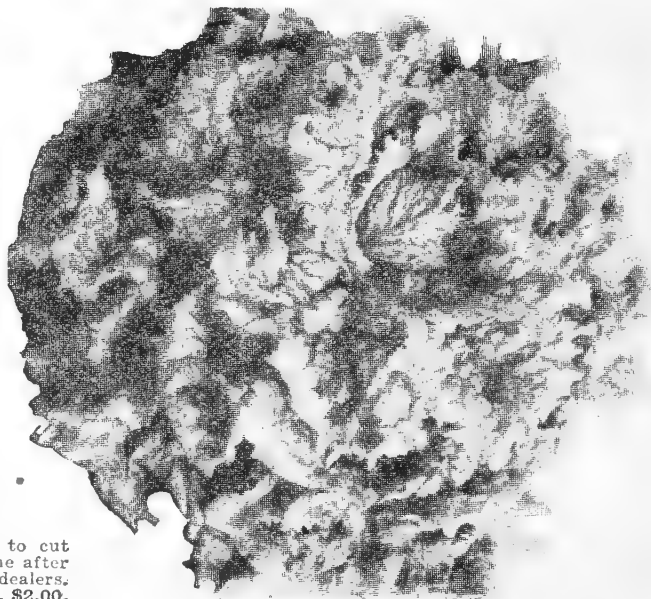

442 Grand Rapids Forcing—Extra Choice

Cushing, Okla., Aug. 28.

Condon Bros. Seedsmen.

Gentlemen:—Last year I ordered some of your Supreme Perfection Muskmelon Seed at Springdale, Arkansas. I had some of the Seed left over and planted 70 hills here at Cushing. I don't believe that I had a melon that weighed less than 7 lbs., and many weighed 15 lbs. and over. It was as sweet as sugar, and thin rinded. I have raised lots of Muskmelon in the past, but this melon takes the head of the class.

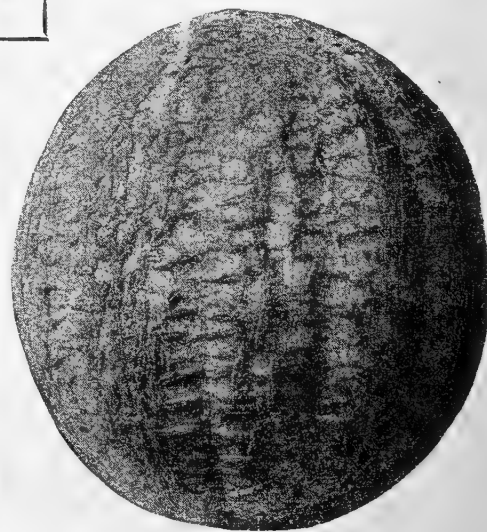

Yours very truly, C. G. BATHE.

Wilt Resistant Strain

Suitable for Shipping One to Three Hundred Miles

There is no melon superior in quality to a good strain of Kleckley Sweets. The bright scarlet flesh is the ideal of water melon quality—firm, crisp, entirely free from stringiness or cotton, and "sweet as sugar."

The melon is oblong in shape, about 20 inches in length by 10 to 12 inches in diameter. The skin is a rich dark green; the rind is thin and brittle, and for this reason the melon is not a good shipper to a distance beyond two or three hundred miles, but for home use and nearby market consumption it's got 'em all backed off the list. Our seed is all saved from hand selected, uniform, well shaped, fully matured, ripe melons. This extra care in selecting the melons from which the seed is saved costs a little more than the method generally used but it insures you seed of the highest quality with strong, vigorous germination. Pkt. 12c; oz. 30c; ¼ lb. 60c; ½ lb. 90c; 1b. 1.65, postpaid.

2014 New Giant Ruffled Tetra-Snapdragons Superfine Mixed Colors

A new race of Snapdragons created scientifically by treating normal flowers with the drug colchicine, which made a fundamental change in the cell formation, in technical terms changing diploids into tetraploids. This resulted in larger flowers with thicker petals, attractively ruffled, fuller spikes with more florets open at one time, heavier stems and sturdier plants. Each plant produces several stems, the central spikes averaging 2½ ft. Mixture includes a complete range of snapdragon colors in harmonious combinations. Pkt. 25c.

2207 Grandmother's Old Fashioned Flowers

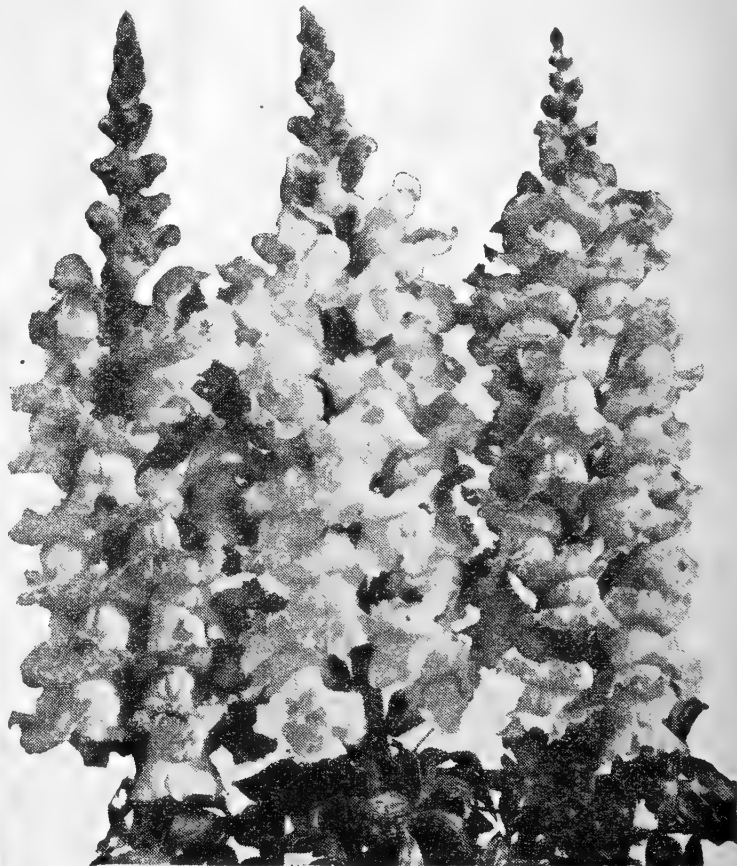

A Blend of Annuals of Which WE ARE Proud

As youngsters you and I remember well whenever we were ready to go home after paying a visit to our Grandmother, it was with a smile that she would say, "Just a minute, Dear, I have something for your Mother," and out into her Flower Garden we would go. Oh! What a garden. There were Asters, Ageratums, Alyssum, Gaillardia, Balsam, Nasturtiums, Poppies, Petunias, Pansies, Salvia, Zinnias, Verbenas, Snapdragons and many other Annuals. It surely was a gorgeous sight. We want all of our customers to have such a garden in their own backyard this summer so we have made a blend, with proper proportions, of all of the above annuals and many more that will give you a rainbow of color in your garden from early summer until frost.

The Finest Flavored Parsnip Grown. Sweet and Sugary.
Crisp and Firm, Excellent Keeper.

[1 oz. Plants row 200 feet long.
5 lbs. Plants an acre.]

ENORMOUSLY PRODUCTIVE

Often Making Better than 1200 Bushels from One Acre

Condon's White Queen Parsnip is a highly improved type, producing uniformly large and handsome roots of stocky form, heavy at the shoulder, well rounded, gradually tapering to the base, so that they are easily dug, and if grown in properly pulverized soil, the roots will be smooth and free from wrinkles and side roots. The flesh is white, of fine texture, free from core and stringiness, and especially fine flavored, cooking tender, sweet and rich, rendering it one of the finest of table vegetables for winter use. The roots being hardy may remain in the ground all winter or some may be dug late in the fall and stored in sand or soil, so that they can be easily procured when the ground is frozen. Frost improves their quality. This parsnip is the heaviest cropper of all, and we recommend it for both garden and field culture. Pkt. 15c; oz. 35c; ¼ lb. 70c; ½ lb. \$1.15; lb. \$2.00, postpaid.

Mushroom beds may be made in a warm, dry cellar or in any building where the frost does not penetrate, and in the open air during the summer and fall months. Having procured the spawn, the next thing to be attended to is to make preparations for the beds. About a fortnight or three weeks before the beds are to be made collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to complete easily-understood directions which we send free with each order. One brick will spawn a bed 10 feet by 10 feet.

About Condon's First of All Tomato

"Your First of All Tomatoes are wonderful. I made big money on my crop this year."—Fred G. Deishlie.

Gentlemen:

Dec. 25, Sioux Center, Iowa.

As we had a fine crop of your First of All Tomatoes we had about 2000 plants this year and harvested 500 Bushel of them. We want to praise them very highly, and besides that we enclose a photo of my husband holding a cluster in his hand with 42 well developed Tomatoes on it, and the same vine produced 84 more well grown Tomatoes, and the vine was full of blossoms. We were indeed very well pleased with them. Yours truly, Mr. & Mrs. Ed. Poel.

Gentlemen: I am sending you a cluster of your First of All Tomatoes, that I grew this year. This cluster contains ten large luscious tomatoes. Many clusters contained twelve to fifteen tomatoes. I don't see how the vine holds them up. They are the best I ever saw. I make big money on them.—Earl Mouck.

In shape, CONDON'S PEERLESS is smooth, well formed and extremely deep from stem to blossom, making it unusually heavy. It ripens evenly to the stem and is without ridges or cracks; it has great meatiness and few seeds. It is firm without being hard, unrivalled home and market tomato. The vines are vigorous but compact. The joints are short and it always fruits in large clusters at every second joint, which accounts for its wonderful productiveness. Condon's Peerless is the heaviest for its size of any variety and, on account of its brilliant red color, depth and solidity, is one of the handsomest tomatoes. Its beautiful appearance and color make it sell ahead of all sorts, and its unusual solidity, few seeds and desirable form for rapid peeling without waste, make it a most desirable canning and slicing variety. It costs you no more; takes no more time to grow the best than it does to grow the more common sorts and we think you will find Condon's Peerless one of the Grandest Tomatoes you have ever grown. Forage Crops Every One Should Grow, One Acre Will Produce Tons of High Quality Feed

1340 Feterita

The great advantages Feterita has over Kaffir corn and all other plants of that class are its extreme earliness and great drought resisting qualities. Feterita is from 20 to 30 days earlier than Kaffir corn, makes excellent fodder and produces a large grain crop. Plant 15 lbs. per acre in drills. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50.

1362 Milo-Maize

Forage Plant of Great Merit. Belongs to the Non-Saccharine Sorghums. It is pronounced the best and surest grain crop for dry countries and seasons, even better than Kaffir corn. It grows several smaller heads on side shoots, often as many as eight heads on a stalk. Very valuable for feeding stock and proves a gold mine for chicken feed. Plant 15 pounds per acre in drills. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50.

1346 Atlas Sorgo

A cross between Kaffir and Sourless Cane. Stalks, which grow 7 to 8 feet, and the leaves are juicy, sweet and palatable, making it an excellent silage crop. Has produced 20 tons silage per acre that is relished by all livestock. Plant 15 lbs. per acre in drills or 50 lbs. broadcast. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50.

1348 Hegari

This is a sweet sorghum somewhat similar to cane. Very nutritious. Valuable for grain, dry fodder, ensilage and pasture. Yields up to 5,000 lbs. of grain per acre and up to 18 tons of ensilage. Livestock, especially cattle, are very fond of it due to its sweet taste. For grain production drill like Kaffir 6 to 8 lbs. per acre. For hay, drill in close rows at 75 to 90 lbs. per acre. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50.

Soy Beans—The Big Money Crop

The great need for Soy bean oil has created a tremendous market for beans. The oil has a great many uses. The demand will continue strong for many years. Oil meal is used as a valuable protein supplement in feeding livestock. As a hay crop soy beans outyield Red Clover and equal to it in feeding value. They make a fine green manure crop. Soy beans alone or with Sudan Grass may be used for summer pasture.

A good portion of the crop is generally planted in rows and cultivated one way, sowing ½ bushel seed per acre. Some folks report 5 to 8 bushel yield more per acre when seeded broadcast on good clean land and others report just the reverse. Either method of sowing is satis-

factory but unless your ground is nearly free from weeds we recommend drilling in rows and cultivating one way.

If you sow broadcast figure on using 1 bushel of seed per acre. Another good way to plant Soy Beans is in combination with Corn, dropping one or two Beans in each hill of Corn and when you cut the Corn for Silage the Soys furnish the balance ration of food equal to cotton seed meal. If you don't have a silo, put Soys in Corn anyway and after harvesting the Corn turn the stock in to get the stray ears and Soys, and believe me you will be surprised how all the stock will relish them.

As a Hogging Down Crop, Soys and Corn beat the world. Soy beans also make an excellent Hay Crop. They should be cut just as the pods are formed before the Seed is fully developed so as to prevent the shattering off of the leaf, which is most valuable.

Inoculate with Nitragin Before Planting.

Some people call it "intestinal fortitude." Others call it simply "guts." Anyway, in G-114, it's the ability to stand up against the beating that the North Central Corn Belt often hands out in weather and in insect attacks. Against cold spring dampness. . . . Against scorching summer drought. . . . Against blasting wind. . . . Against corn borers and other insect enemies. G-114 comes through. Even when harvest is long delayed, G-114 stands, firmly erect. In Iowa 4-year tests, its percentage of lodging was lowest (2.9%) of any strain entered. And it yields with the best. G-114 foliage stays green after the ear starts to mature, making the extra starch necessary to finish both a heavy ear and a strong stalk. Postpaid, 1 lb. 45c; 2½ lbs. \$1.00; 5 lbs. \$1.75.

Fancy Recleaned Native Seed

White Clover is a low, smooth, perennial herb arising from a straight tap root. The plant possesses creeping stems which develop adventitious roots at the nodes. A long life, deep rooted legume that will grow on poor or rich soil. Will grow on light sandy and gravelly soils, as well as heavy clay, and will stand a moderate amount of alkali. Provides the finest feed when most other pasture grasses and clovers are dormant. Plants grow stems 12 to 30 inches long. Has a deep tap root with many branches. Crop resembles fine stemmed Alfalfa, and is high in mineral and protein content. Sow 5 lbs. per acre alone. However, we recommend sowing 2 lbs. in mixtures of other grasses such as Timothy, Blue Grass, Orchard Grass, or Brome Grass. If sown alone it has a tendency to mat. Shallow sowing, ¼ to ½ inch, no deeper, in well prepared seed bed is essential. ½ lb. 75c; lb. \$1.40; 2½ lbs. \$3.38; 5 lbs. \$6.50, postpaid.

1234 Ladino Clover

Ladino Clover is a perennial form of Giant White Dutch Clover which spreads by surface runners that root at the joints. The main branch of the runners lies flat on the ground, but the leafy stalks which produce the foliage grow from 15 to 24 inches tall and the leaves resemble in size and shape those of Red Clover. Excellent for pastures, and should not be sown alone except for seed purposes. Excellent for lowlands that are not wet, and for pasture recommend a mixture of 2 lbs. of Ladino, 3 lbs. Medium Red Clover and 8 lbs. of Brome Grass. On upland 1 lb. of Ladino Clover mixed with 8 lbs. of Alfalfa, 3 lbs. Red Clover and 8 lbs. Brome Grass will give you a wonderful pasture that will last about 4 or 5 years. ½ lb. \$1.35; lb. \$2.50; 2½ lbs. \$6.00; 5 lbs. \$11.75, postpaid.

1248 Medium Red or June

60 lbs. per bu.

Sow 12 lbs. per acre. Splendid for hay, pastures, or for fertilizer crop to plow under. Especially desirable for dairy cows on account of its high percentage of nitrogenous elements. Two cuttings may be made in a season. Northern grown Medium Red or June clover has become widely known for its purity, strong vitality, vigorous growth and stooling qualities. The best is the cheapest when it comes to clover seed. We handle "The Very Best Obtainable." Postpaid, ½ lb. 45c; lb. 85c; 2½ lbs. \$2.05; 5 lbs. \$4.00. For Larger Quantities See Wholesale List Enclosed.

1251 Mammoth Red—Sow 12 lbs. per Acre

60 lbs. per bu.

Larger and coarser than Medium Red and two weeks later. Yields much more bulk than medium clover, but makes only one crop. Pasture after that. Largely used to restore fertility to worn-out soil. Postpaid, ½ lb. 45c; lb. 85c; 2½ lbs. \$2.05; 5 lbs. \$4.00. For Larger Quantities See Wholesale List Enclosed.

1235 Alsike—Sow 8 lbs. per Acre

60 lbs. per bu.

Hardest of all Clovers, resisting even the most severe cold. Especially adapted to low, moist soils where other Clovers fail and, at the same time, gives perfect satisfaction on the upland. Makes ideal combination hay when mixed with Timothy at the rate of ¼ Alsike, ¾ Timothy. Postpaid, ½ lb. 42 cts.; lb. 80 cts.; 2½ lbs. \$1.90; 5 lbs. \$3.55. For Larger Quantities See Wholesale List Enclosed.

LESPEDeza CLOVER

Our Annual and Perennial Lespedeza Seed is all hulled and scarified and germinates quickly, weighing 60 lbs. per bushel, and is much superior to the unhulled Seed offered by many.

CLOVER-LESPEDeza-ANNUAL and PERENNIAL

1243 Korean Lespedeza Annual

AN EARLY DROUGHT-RESISTANT
SOIL-BUILDER

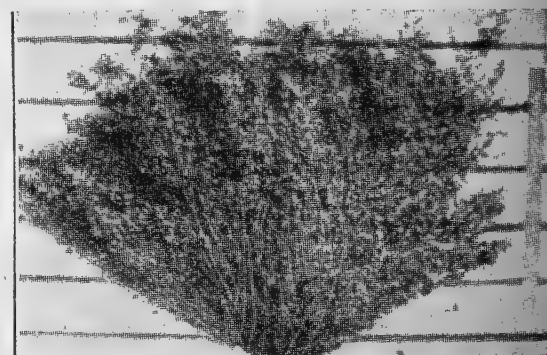

Does Especially Well in High Altitudes. Greatest Annual Pasture or Hay Crop Ever Introduced.

The abundant growth and deep penetrating roots covered with nodules make it an outstanding grazing and soil-building legume. The strong root growth penetrates about 8 inches deep, making it highly drought-resistant, and thrives on poor, wornout soils where alfalfa and clovers would fail. In feeding value it is about equal to alfalfa; has no woody stem; holds its leaves well and produces a full crop the first season. A harrowing before sowing is the only preparation necessary. Postpaid, ½ lb. 30c; lb. 50c; 2½ lbs. \$1.20; 5 lbs. \$2.25. For Larger Quantities See Wholesale List Enclosed.

1245 Lespedeza (Sericea) Perennial

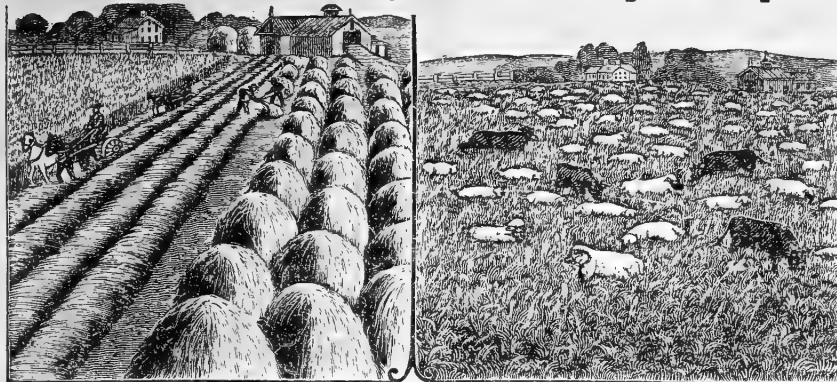

The new permanent Clover introduced by the U. S. Dept. of Agriculture. Perennial legume which grows on poor land and acid or sour land as well as rich land. After established, it is a great drought-resister with an enormous root system. It enriches the soil, lives through the winter, starts growth early in spring and gives at least 3 cuttings a season with as high as 3 tons per acre at one cutting of hay. All kinds of stock relish the hay, and it may be closely grazed. We do not recommend Sericea in latitudes North of Springfield, Illinois.

Sow rather shallow in the spring or fall in well prepared warm soil 4 lbs. per acre in drills or 12 lbs. per acre broadcast. Postpaid, ½ lb. 35c; lb. 65c; 2½ lbs. \$1.55; 5 lbs. \$3.00. For Larger Quantities See Wholesale List Enclosed.

The Great Lespedeza Clover

Profitable Forage and Hay Crops

1343 Canadian Field Peas

Illustration to left shows field of Canadian Peas and Oats yielding 5 tons per acre 60 days from planting.

Canadian Field Peas and Oats seeded in the early spring at the rate of 1 bushel of each per acre, make the best extra early annual hay crop. This combination makes an average yield of 2 18/100 tons of excellent feed per acre. Feed is almost equal pound for pound to Clover Hay. It is relished by all live stock. Canadian Field Peas are extremely hardy; therefore may be seeded very early along with your Oats. They may be broadcast or sown with a grain drill, but be sure to cover the seed about 1/2 inch deep in either case. If you want this for a hog pasture suggest you add 5 lbs. of Dwarf Essex Rape per acre. Postpaid, lb., 45 cts.; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

Sugar Cane for Fodder

1333 Cow Peas Mixed Whippoorwill-Type (Bu. 60 lbs.)

When danger of frost is over sow broadcast 1 Bu. per acre or 45 lbs. in drills 36 inches apart. Cow Peas produce one of the largest and the most nutritious forage crops grown. When turned under, they furnish nitrogen and generally enhance the fertility of the soil. They make a fine feed for work and beef-stock and for dairy herds, and are nearly equal in value to alfalfa and wheat-bran. Postpaid, lb., 55 cts.; 2 1/2 lbs., \$1.25; 5 lbs., \$2.25. For Larger Quantities See Wholesale List Enclosed.

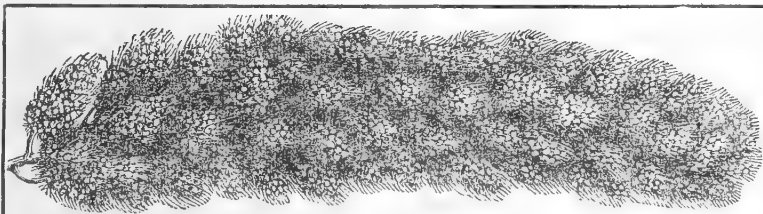

Cow Peas Whippoorwill

1416 Sugar Cane for Fodder

Makes Wonderful Silage. Often Yields 30 Tons Per Acre. Sow 20 lbs. Per Acre in Drills, 50 lbs. Broadcast.

Every farmer should have at least 5 or 10 acres of our Fodder Sugar Cane, a most profitable crop. It produces as much as 30 tons of green feed per acre. It makes wonderful silage either alone or drilled with Corn, improving feeding value of Corn fifty per cent. Prices very reasonable this year. Postpaid, lb., 45 cts.; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

Millet When Corn fails you or when Season is too wet for Corn on low bottom ground here is the one crop you can sow as late as July and harvest a Big Crop of excellent hay.

1356 Millet—Golden Beauty (Bu. 50 lbs.)

The most popular and most widely grown variety. Wonderful milk producer, big yielder of good palatable hay. Sow 3/4 bu. per acre. Postpaid, lb., 45c; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

1358 Billion Dollar Grass (Bu. 35 lbs.)

One of the best forage crops for feeding all kinds of livestock. High in milk-producing qualities, being rich in protein and fats. Combined with soy beans, as ensilage, it makes an ideal balanced ration (two parts of millet to one of soy beans). Adapted to all sections of the country; it makes more hay than any other millet, and requires less seed. It is the ideal catch crop, and may be sown from May to July. For hay, cut it just before it blossoms, and cure the same as clover. It also makes good pasture, but the cattle must be accustomed to it gradually. Postpaid, lb., 45 cts.; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

1382 Rape-Dwarf Essex

New Low Prices

Farmers' Friend, Hogs' Delight Have At Least 5 Acres This Year

Rape is an annual forage plant of great value, profitable in all sections of the country. It can be grown to advantage on land which has already produced an early grain crop like oats, rye, or winter wheat.

Rape provides excellent pasture for all kinds of live stock, cattle, hogs and sheep. It can be sown at any time during spring or summer, so a good pasture can be had whenever it is needed. Sow 8 to 10 lbs per acre broadcast. Postpaid—1/2 lb., 30 cts.; lb., 50 cts.; 2 1/2 lbs., \$1.15; 5 lbs., \$2.00. For Larger Quantities See Wholesale List Enclosed.

1338 Alta Fescue

An improved strain of tall fescue which was developed at the Oregon Agriculture Experiment Station. Produces high yields of palatable forage over a long growing season. For pasture sow 15 pounds per acre with other legumes such as Ladino Clover. Grows well on wet soil even when poorly drained, but also will endure drought. Because of its extensive root system it has the ability to prevent soil erosion in water ways and to form a dense turf on banks. It stands up under traffic and though coarse is excellent for athletic fields, airports, playgrounds and lawns where there is heavy traffic. Postpaid, 1/2 lb. 50c; lb. 95c; 2 1/2 lbs. \$2.30; 5 lbs. \$4.50. For Larger Quantities See Wholesale Price List Enclosed.

1418 Sweet Sudan Grass

Wonderful Quick Hay Crop

One of the best annual forage plants ever introduced, suitable for almost any locality. Sudan Grass thrives best on rich loam, but has been grown successfully on almost every kind of soil, from heavy clay to light sand. Cold, wet, boggy soils are not suited to Sudan Grass.

Sudan Grass is a sorghum, and an annual, without underground root sprouts. It grows 4 to 5 feet high in drilled seedings, and 5 to 8 feet in cultivated rows. Do not sow Sudan Grass before corn planting time. Like corn, it is a warm weather crop. In favorable seasons, the growing period is long, and several cuttings can be obtained in one season. For hay it is ready to cut in 60 to 75 days, when it is in full head. It continues its growth, and in 40 to 45 days it is ready for another cutting.

Sudan Grass is an enormous yielder, producing 3 or 4 tons of hay at the first cutting. The second cutting is lighter, and the hay is much finer. Live stock of all kinds will eat the hay readily.

For hay, sow at the rate of 20 to 30 lbs. per acre, using a grain drill, and cover from one to one and one-half inches deep. Heavy seeding makes finer quality hay.

1418 Sweet Sudan

1227 Buckwheat-Japanese (50 lbs. bu.)

The very finest variety. A most profitable crop for all Northern farmers; does well even on light soils. Sow any time until July 1, using 36 lbs. of seed per acre if drilled or 50 lbs. per acre broadcast. Postpaid, lb. 45c; 2 1/2 lbs. \$1.00; 5 lbs. \$1.75.

For Larger Quantities See Wholesale List Enclosed.

This new introduction Sweet Sudan has been bred to produce a higher sugar content than the common strain and, therefore, much superior for livestock feeding. Developed by Texas Agr. Stations, but up to the present time only limited supply of seed is available so please order promptly that we may serve you on some of this new forage crop before supply is exhausted. It is more disease resistant than the old Sudan and being of sweeter quality the stock eat it down first. Produces more plant-growth than common and remains green longer. In view of the superior quality of Sweet Sudan over the old common strain we offer only the best and newest Sweet Sudan. Postpaid—1/2 lb. 30c; lb. 50c; 2 1/2 lbs. \$1.15; 5 lbs. \$2.00. For Larger Quantities, See Wholesale List Enclosed.

The New Clinton Oat

Certified Seed Oats

The New Clinton

The New Helminthosporium Resistant Oat

Clinton is the new introduction of the University of Iowa. It was developed co-operatively by the Iowa Station and the United States Department of Agriculture and jointly distributed by the Iowa, Illinois, and Indiana station. Clinton is outstanding for yield, tests weight, and strength of straw. Many report better than 85 bushels per acre. Measured weight 35 lbs. or more per bushel right from the combine. It is a medium tall, yellow, early oat with plump kernels and thin hulls. On account of its stiff strong straw Clinton tops the list for heavy soils where lodging has been troublesome. Clinton is resistant to halo blight and helminthosporium leaf blotch disease which cause seedling blight and leaf spots, thereby cutting down the ability of the plant to produce a good crop.

1374—Clinton Certified Seed. Postpaid, lb., 40c; 2½ lbs., 95c; 5 lbs., \$1.75.

The Great Vicland

Wisconsin's Newest and Heaviest Yielding
Rust and Smut Resistant Oat

Vicland was developed by the Wisconsin Agricultural Experiment Station from a cross between Victoria, a South American Oat, and Richland, a variety that originated in Russia. Vicland is a very heavy yielder. Many customers report average yield better than 80 bushels per acre. Measured weight, 34 to 36 lbs. per bushel. It's an early yellow short straw, but on fertile soil the straw grows to a good height. Not recommended for soil low in fertility as the straw is apt to be too short to cut with a binder. When shocked it will stand for a long period without germinating. A distinct advantage in rainy weather.

1372—Certified Seed. Postpaid, lb., 35c; 2½ lbs., 80c; 5 lbs., \$1.50.

SEED POTATOES

For upwards of half a century, we have been producers and distributors of high grade Seed Potatoes to customers throughout the nation.

Railroads are now so congested that shipment of perishable goods like Potatoes in less than earlots to distant points, with the excessive freight rate that now applies, is not a practical procedure from the planter's standpoint for the following reasons:

1st. Customers living in the extreme West, South and Southeast require their Seed Potatoes in early February and at that season of the year, we cannot ship by freight in less than earlots on account of freezing weather. If shipped by express, the charges are excessive. Later in the season when our weather moderates so that we can ship Potatoes by freight, the delay in transportation prevents their arriving in ample time for early planting.

Until these conditions adjust themselves more favorably with quicker dispatch by freight or lower express rates, we are discontinuing the handling of the full tuber of Seed Potatoes, recommending to our customers, who want only reasonable quantities for their own private planting, to buy Potato Eyes, which are all cut from Pure Bred Seed, carefully packed and shipped by parcel post direct to your door at proper time for planting.

These Potato Eyes will give just as good satisfaction as if you had the original tuber and did your own cutting.

We offer the following outstanding varieties of Seed Potato Eyes:

1630 Improved Extra Early Ohio

Very early, extra fine cooking quality, heavy yielder. Skin is light reddish-pink, smooth. Flesh is white, firm, fine grained.

1632 Irish Cobbler Fine Early Potato—Resistant to Blight

Tubers are nearly round and slightly flattened. The skin is white, with deep eyes.

1631 Improved Green Mountain

One of the best late sorts, yielding big crops of large, smooth, white skinned tubers, oblong to roundish shape.

1626 Chippewa

A new late heavy yielding variety, resistant to mild Mosaic. Skin white, smooth, shallow eyes.

All varieties described on this page at the following uniform prices: 50 Eyes \$1.00; 100 Eyes \$1.75; 200 Eyes \$3.00; 500 Eyes \$6.50; 1000 Eyes \$12.00.
